OBJECTIVE

Final-year CSE (AI & ML) student at VIT Bhopal University with a strong foundation in C++, DSA, Machine Learning and Java full-stack web development. Experienced in building end-to-end applications using Java, Spring Boot, React, and MySQL. Seeking opportunities in Software Engineer and Machine Learning Engineer roles to contribute to scalable enterprise solutions while growing within a structured organization.

EDUCATION

VIT Bhopal University

Bachelor of Technology – Computer Science & Engineering (AI & ML)

Sehore, MP

2023 – 2027

- CGPA: 8.87 / 10.0

Dr. Jagannath Mishra College

Intermediate (Class XII)

Muzaffarpur, Bihar

2021 – 2022

- Percentage: 78.2%

Disha Delphi Public School

Matriculation (Class X)

Kota, Rajasthan

2019 – 2020

- Percentage: 83.6%

TECHNICAL SKILLS

Backend Frameworks: Spring Boot, Spring MVC, REST APIs, Flask

Frontend: React.js, JavaScript, HTML, CSS

Languages: Java, Python, C/C++, JavaScript, SQL

Databases: MySQL (Relational), JDBC, JPA/Hibernate (Basic)

Libraries & Tools: NumPy, Pandas, Scikit-learn, Matplotlib, Tableau

DevOps & Version Control: Git, GitHub, VS Code, IntelliJ IDEA

DSA: Arrays, Linked Lists, Trees, Sorting & Searching

Relevant Coursework: Data Structures & Algorithms, DBMS, OS, OOP, Cloud Computing, Software Engineering

Soft Skills: Adaptability, Communication, Teamwork, Attention to Detail

PROJECTS

Hospital Management System | Java, Spring Boot, Spring Security, JWT, MySQL, React, REST API

- Built a full-stack Hospital Management System with secure **JWT-based authentication** and **role-based authorization** for Admin, Doctor, Receptionist, and Patient using Spring Security.
- Developed RESTful APIs for patient management, doctor management, appointment scheduling, billing, and medical records using Spring Boot, Spring Data JPA, Hibernate, and MySQL.
- Implemented end-to-end appointment workflows including booking, rescheduling, cancellation, doctor availability, and appointment status tracking to streamline hospital operations.
- Designed modules for patient medical history, diagnoses, prescriptions, lab reports, invoices, and payment history with optimized relational database design.
- Structured the application using a layered architecture (Controller, Service, Repository) with input validation, centralized exception handling, Swagger API documentation, and Git-based version control.

Student Library Management System | Java, Spring Boot, MySQL, REST API, React

- Built a full-stack **CRUD** application using **Java Spring Boot** as the backend REST API layer and React.js for the frontend interface.
- Designed RESTful endpoints (GET, POST, PUT, DELETE) for managing book inventory, student records, and borrowing history using **Spring MVC** and **JDBC/MySQL**.
- Implemented input validation, exception handling, and HTTP status codes following industry REST API standards.
- Structured the project using MVC architecture with separation of Controller, Service, and Repository layers.
- *Tech Stack:* Java, Spring Boot, MySQL, React.js, REST API, Git

Sentiment Analyzer | *Java, Spring Boot, HuggingFace API, HttpClient, Python, MySQL, JUnit 5*

- Integrated **HuggingFace Inference API** using Java's HttpClient to classify text as Positive, Negative, or Neutral with confidence scores.
- Built a **Spring Boot REST endpoint** that accepts text input, calls the ML API, parses JSON responses, and returns structured sentiment results.
- Processed a dataset of **500+ product reviews** (Yelp CSV) using OpenCSV, analyzed them in batches, and stored results in MySQL.
- Implemented **batch processing logic** with rate-limiting and retry mechanisms to handle API timeouts and quota limits gracefully.
- Wrote **unit tests** using JUnit 5 for sentiment parsing and text preprocessing logic.

Real-Time Collaboration Platform | *JavaScript, HTML, CSS, Python, Flask*

- Designed and developed a responsive web platform for hackathon team coordination with real-time task management.
- Implemented filtering algorithms to filter results based on user requirements.
- Used Flask as a lightweight backend to serve APIs for task state management.
- *Tech Stack: JavaScript, HTML, CSS, Python, Flask*

CERTIFICATIONS

Machine Learning with Python – Coursera — [Certificate Link](#)

Skills: Scikit-Learn, Regression, Classification, Clustering, Model Evaluation

Completed: Dec 2025

NPTEL – Cloud Computing (Elite Grade)

Cloud architectures, deployment models, scalable system design

2025

NPTEL – Internet Of Things (overall score 90)

IoT architecture , embedded systems , IoT communication protocols

2026

Deloitte Australia – Data Analytics Job Simulation (Forage) — [Certificate Link](#)

Tableau Dashboard, Excel data classification, business insights

July 2025

Deloitte Australia – Technology Job Simulation (Forage) — [Certificate Link](#)

Development and coding simulation

July 2025

AREAS OF INTEREST

Java Full Stack Development | Cloud Engineering | Machine Learning | Data Structures and Algorithms
